

PRESS RELEASE 20/07/10

Firewire is committed to advancing surfboard performance through refinements to shape combined with new materials and construction techniques. We believe that refinements to the shape of today's modern surfboard can only produce incremental performance benefits. Exponential improvements in performance can only be achieved through new materials and construction methods, which in turn will open up new design opportunities.

So whether you prefer the WCT proven Future Shapes Technology (FST) championed by Taj and Michel Bourez on the world tour, The Direct Drive (DD) carbon rod suspension technology, or the new RapidFIRE (RF) bamboo and carbon rod hybrid, Firewire are the boards to take you surfing to the next level.

Come and check out our 2010 /2011 range at Hub including the DOMINATOR, SPITFIRE, EL FUEGO, SWEET POTATO, ARBOR KOA & TAJ PRO MODEL!
