

PRESS RELEASE

INTRODUCING THE WORLD'S MOST PROTECTIVE BOARDBAG

There has been minimal evolution of protective surfboard bag design since its inception. SOMA has now taken it to the next level with our CAD engineered technology engaging compound functionality of protection and symmetry utilizing air pressure and dimension.

Our bags are exponentially more protective than the thickest of standard foam bags, inflate without a pump in under 5 minutes, are lightweight and portable (deflates and rolls into a 26" x 7" carry bag), and can double as a comfortable bed in any airport, van or friends apartment!

Don't believe us? Visit us at Hub and jump, sleep and generally abuse our bags for yourself!
